.. Not available. PPP is purchasing power parity; an international dollar has the same purchasing power over GDP as a U.S. dollar has in the United States. Note: Rankings include only those economies with confirmed PPP GDP estimates. Figures in italics are for 2005 or 2004.

a. Estimate is based on a 1986 bilateral comparison of China and the United States (Rouen and Kai 1995) employing a different methodology than that used for other countries. This interim methodology will be revised in the next few years. b. Estimate is based on regression; other PPP figures are extrapolated from the latest International Comparison Program benchmark estimates. c. Data refer to mainland Tanzania only.
